Applicant(s)

ANGELO ET AL.

Examiner

Duc T. Doan

Art Unit

2188

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 07 March 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-28 and 31-34 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 27 and 28 is/are allowed.
- 6) ☒ Claim(s) 1-26 and 31-34 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

## Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

## DETAILED ACTION

### *Status of Claims*

Claims 1-32 have been presented for examination in this application. In response to the last office action, claims 1,2,8-22,31 were amended, claims 29-30 have been canceled, and claims 33-34 have been added. As the result, claims 1-28,31-34 are pending in this application.

Claims 27-28 are allowed.

Claims 1-26,31-34 are rejected.

Applicant's remarks filed 3/7/07 have been fully considered but they are not persuasive. Therefore, the rejections from the previous office action are respectfully maintained, with changes as needed to address the amendments..

### *Claim Rejection 35 USC 101*

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 8-13, 14-20 rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claim 8, 14 direct to a security module which is a software/program (see specification's paragraph 21, lines 1-2). Therefore, the claimed invention is directed to non-statutory subject matter.

All dependent claims are rejected as having the same deficiencies as the claims they depend from.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-26,31,32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Timson et al (6041412) in view of Challener (US Pub 2003/0174842).

As in claim 1, Timson discloses a method to operating security modules in a computer (Timson's Fig 1: #2 CPU corresponding to the claim's computer, two security modules (Fig 1: #50, #60, Fig 2: #8, dual secure data modules, column 8, lines 48-65) attaching locally to the computer. Timson does not disclose the claim's detail acts associating with the security modules, However, Challener'842 describes a method for storing private key of one security in another security module using establish standard such as TCPA (Challener's paragraph 6, lines 1-10) comprising the acts of: detecting a second security module in the computer; determining whether a key associated with the second security module is available to the first security module

Art Unit: 2188

(Challener'842's paragraph 28, Fig 3: #54 query whether user's private key is stored on the TCM server, Fig 1: #40 that corresponds to the claim's first security module); and obtaining the key associated with the second security module if the key associated with the second security module is not stored at the first security module (Challener'842's paragraph 28, server obtains the private key from the client's security module, Fig 1: #54 that corresponds to the claim's second secure module, Fig 1: #22; Challener's paragraph 12 discloses that the first security module, TCM server Fig 1: #40, obtaining the private key associating with the second security module, Fig 1: #22, and providing this key information to a client/user. Obviously, if this key has not been stored at the first security module, the first security module, server, will obtain it from the client's computer and save it for future referencing, in a migrating manner, see Fig 4a, and paragraph 32).

It would have been obvious to one of ordinary skill in the art at the time of invention to include the method and associating apparatus for storing private key of one security in another security module using establish standard such as TCPA in Timson's system, thereby the private key of one security module can be retrieved from another security safely with any computers enable with established standard such as TCPA (see Challener's paragraph 8).

Timson further discloses the modules of card readers 8 and 9 can be easily integrated into one integrated unit. That is the integrated unit with logic including both enable module and integration module. Thus the integrated unit can retrieve data in a secure module (Fig 1: #50 secure module having data to be read, interrogating data, corresponding to the claim's reading key) using read logic (i.e reader #8) and storing the data controlled by another secure module (Fig 1: #storing the data using the secure logic associating with the reader #9 and #60, enable

Art Unit: 2188

module, column 9 lines 1-16). Timson further discloses that the secure modules must be of the same type (Timson's column 2 lines 30-40 discloses the logic associating with enable and interrogate modules such that **they must be of the same security scheme** (corresponding to the claim's **modules of same type**).

As in claim 2, Challenger further discloses wherein each of the first security module and the second security module is a trusted platform module ("TPM") (Challener'842's paragraph 26 describes the server TPM Fig 1: # 40 including modules conforming to the trusted platform module specification (see Challener'842's paragraph 6); Challener'842 paragraph 12 further disclose the TCPA is employed in the second security module, for example Fig 1: #22).

As in claim 3, Challenger'842's paragraph 28 further describes comprising the act of requesting the key from the second security module (claim 3; requesting private key from client's system Fig 1: 312).

As in claim 4, Challenger further discloses the act of sending a public key from the first security module to the second security module if the key associated with the second security module is not stored at the first security module (Challener'842's paragraph 28 discloses when the user's private key is not stored in the first security module (Fig 1: #40 TPM server), the server Obviously send the public key (public non-migratable key of the server) to the second security module which being used to "wrap" the private key, and the second security module sends this wrapped information back to the TPM server).

As in claim 5, Challenger further discloses the act of sending a public key along with validation information from the first security module to the second security module if the key associated with the second security module is not stored at the first security module

Art Unit: 2188

(Challener'842's paragraph 31 discloses for both the requesting and responding messages, additional information to validating the messages can be sent along, for example, information associating with authorization for the sender of messages) .

As in claim 6, Challener further discloses the act of storing the key in a memory associated with the first security module (Challener'842 Fig 1: #48, #50).

As in claim 7, Challener further discloses the act of defining the key to be a private key (Challener'842's paragraphs 24, 27).

Claims 8,14,21,31 rejected based on the same rationale as in the rejection of claim 1.

Claims 9,15,22,32 rejected based on the same rationale as in the rejection of claim 2.

Claims 10,16,23 rejected based on the same rationale as in the rejection of claim 3.

Claims 11-12,17-18,24-25 rejected based on the same rationale as in the rejection of claims 4-5 respectively.

Claim 19 rejected based on the same rationale as in the rejection of claim 6.

Claims 13,20,26 rejected based on the same rationale as in the rejection of claim 7.

Claims 33-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Timson et al (6041412), Challener (US Pub 2003/0174842) as applied to claims 1 and 8 respectively, and in view of Dickinson et al (US 7187771).

As in claim 33 Challener discloses comprising the act of accessing data encrypted by the second security module using the key associated with the second security module (Challener discloses a method in which a first secure module (Fig 1: #40) can access data encrypted by the second security module using the key associated with second security module (Challener's Fig 3:

Art Unit: 2188

(Challener's Fig 3: #60-64, paragraph 31, the stored private key (corresponding to the claim's data) is encrypted using non-migratable public key (corresponding to the claim's key associating with the second security module), and returning the user's private key/data to the client). In other words, Challener teaches a method in which a first security module can retrieve a data associating with the second security module by using the stored key associated with the second security module and presenting the data to the user. Timson and Challener do not expressly disclose the aspect of the claim's regarding the failure of the second security module. However, Dickinson discloses a method in which important data is controlled by secure/trust module logic (see Abstract, Fig 2). Dickinson further discloses that the secure/trust system comprises several redundancy engines authenticate engines, trusted engines (see Dickinson's column 5 lines 60-67, column 13 line 46 to column 14 line 3, trust engines perform authenticate functions), which control several redundant copy of critical data, such that the failure of one module/one component would not affect the overall secure system.

It would have been obvious to one of ordinary skill in the art at the time of invention to include the redundant method for storing copies of data controlled by redundant secure/trusted modules in Timson's system modified by Challener and thereby if one of the secure module fails, the data can be obtained from the remaining secure modules and other copies of data (see Dickinson's column 17 lines 46-61).

Claim 34 is rejected based on the same rationale as of claim 33.

### ***Response to Arguments***

Applicant's arguments in response to the last office action has been fully considered but they are not persuasive. Examiner respectfully traverses Applicant's arguments for the following reasons:

A) Regarding Applicant's remarks on pages 10-13 for the rejections of claims 8-20 under 35 U.S.C 101,

Examiner maintains the claims 8 and 14 directs to the security module, which is a software/program (see specification's paragraph 21, lines 1-2). Therefore, the claimed invention is directed to non-statutory subject matter.

All dependent claims are rejected as having the same deficiencies as the claim(s) they depend from.

B) Regarding Applicant's remarks on pages 13-17 for the rejections of claims 1-26,31-32 under 35 U.S.C. 103(a),

It's noted that Applicant's remarks on pages 13-14 fails to specifically point out any error of the rejections in the previous Office action.

C) Regarding the remarks on pages 15-18 for the amended limitation "wherein the second security module is one of the same type as the first security module. Timson teaches the "type" limitation as follows,

Timson further discloses the modules of card readers 8 and 9 can be easily integrated into one integrated unit. That is the integrated unit with logic including both enable module and integration module. Thus the integrated unit can retrieve data in a secure module (Fig 1: #50 secure module having data to be read, interrogating data, corresponding to the claim's reading key) using read logic (i.e reader #8) and storing the data controlled by another secure module

(Fig 1: #storing the data using the secure logic associating with the reader #9 and #60, enable module, column 9 lines 1-16). Timson further discloses that the secure modules must be of the same type (Timson's column 2 lines 30-40 discloses the logic associating with enable and interrogate modules such that **they must be of the same security scheme** (corresponding to the claim's **modules of same type**).

### *Conclusion*

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP 706.07(a).

Applicant is reminded of the extension of time policy as set forth in 36 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

When responding to the office action, Applicant is advised to provide the examiner with the line numbers and page numbers in the application and/or references cited to assist examiner to locate the appropriate paragraphs.
